

MUSIC CITY SPECIALTY WELDING

THE LEAD BOARD OWNER'S GUIDE

Every job that comes to the shop — from the first phone ring to the paid invoice — lives on one board. This guide covers everything: signing in, working leads, money, invoices, and the emails that go out under your name.

MUSICCITYSPECIALTYWELDING.COM/OPS · (615) 810-4910 · 533 W
BADDOUR PKWY, LEBANON TN

01 SIGNING IN — NO PASSWORDS, EVER

There is **no sign-up**. Only the shop's own mailbox can get in, so there's no password to forget or steal.

1. On any phone or computer, go to **musiccityspecialtywelding.com/ops**
2. Type the shop email: **sales@musiccityspecialtywelding.com**
3. Open that inbox. An email called *"operations sign-in link"* arrives in seconds. Tap the button.
4. You're in — and that device **stays signed in about 30 days**. Do it once per phone/computer.

EMPLOYEES

Workers sign in the exact same way, using the same shop mailbox — have them do the link step while someone who can open the shop inbox forwards or taps it. Every action they take on a ticket is recorded in that ticket's history. If you later want a separate operator address, that's a one-line settings change — ask your web person.

Lost the link? Links work once and die after 15 minutes. Just request a fresh one — there's nothing to reset.

02 TURN ON PHONE ALERTS (DO THIS FIRST)

1. Signed in on your phone, tap **"Enable phone alerts"** at the top of the board.
2. Your phone asks permission for notifications — tap **Allow**.

From then on your phone buzzes the moment a lead hits the board — name, job, phone number; tapping it opens the ticket — and again when a follow-up reminder comes due. Works for every phone that turns it on (you and the crew).

If the button says *"notifications blocked in browser settings"*, notifications are turned off for the whole browser on that device. On iPhone: add the site to the Home Screen first, then enable. On Android: Site settings → Notifications → Allow.

03 READING THE BOARD

- **The gauge** — your median time from a lead arriving to the first call-back. Green under 15 minutes. This number is the single biggest thing that wins jobs.
- **NEEDS YOU NOW** — the strip at the top: overdue reminders and leads nobody has called back. Each card has one-tap **Call** and **Text**.
- **The tiles** — new leads, awaiting call-back, follow-ups due, won this month, all-time revenue, quotes on the street, failed email deliveries (should always be 0).
- **Job tickets** — every lead is a paper ticket: number, name, job, where it came from (a Google ad, Google search, or direct), the rubber stamp (its status), the dollar value, and **Call / Text / Open** buttons.
- **Heat edges** — a ticket nobody has called gets an orange edge after 1 hour, red after 4. Red edges cost money.
- **Search & filters** — search any name, phone, job, or note. Filter chips show counts per stage.

04 WORKING A LEAD, START TO FINISH

1. **Phone buzzes / ticket appears.** Tap Call on the ticket. Talk to them.
2. **Open the ticket** → "**Mark first response.**" That stops the clock on the gauge. If you already talked, use "**Log a touch**" (called / texted / left voicemail) — the first touch counts automatically.
3. **Set a reminder** — in 4 hours, tomorrow, 3 days, next week. The board emails and buzzes you when it's due. Nothing gets forgotten.
4. **Save the estimate.** Enter the dollar figure — the ticket is stamped QUOTED. If they gave an email, tick "**email this estimate to the customer**" and they get a clean branded quote.
5. **Win it: save Final revenue.** Enter what it actually paid — stamped WON, counted in revenue. Tick "**job completed**" when the work's done, and optionally "**send the thank-you email.**"

6. **Lost it or junk?** Stamp it lost or spam — a reason is required, so six months from now you know why.

PHONE AND WALK-IN CUSTOMERS

Tap "+ **Write up a phone or walk-in lead**" on the board — name, phone, job, how it came in. Twenty seconds, and every job you get lives in one place, not just the website ones.

05 INVOICES — MADE IN QUICKBOOKS, CHASED BY THE BOARD

You keep sending invoices **exactly the way you do today, from QuickBooks**. QuickBooks stays the money system of record. The board's job is making sure no invoice gets forgotten:

- 1. Send the invoice from QuickBooks like always.
- 2. Open the job's ticket → Money section → type the **QuickBooks invoice #**, pick the terms (due on receipt / net 7 / 14 / 30) → **"Invoice is out."**
- 3. The ticket now shows INV #1337 out — and turns **red OVERDUE** past the due date.
- 4. Every morning's digest email lists **every unpaid invoice** until the money lands.
- 5. When QuickBooks shows the payment, enter it as **Final revenue** on the ticket. That marks it paid and closes the chase.

Why not send invoices from the board? Two systems both making invoices means two versions of your money. QuickBooks bills; the board remembers. One truth each.

06 EVERY EMAIL THE SYSTEM SENDS

WHEN	WHO GETS IT	WHAT IT SAYS
Lead submits the website form	You (+ phone push)	Full job details, photos attached, link to the ticket
Same moment	The customer	"We got your job — a real person will call you." Automatic.
A reminder comes due	You (+ push)	"Follow-up due now" with the tickets, hourly sweep
You tick "email this estimate"	The customer	The quote, scope-honest wording. Never sends unless you tick it.

You tick "send the thank-you"	The customer	"Job's done — we stand behind what we weld. Keep our number."
Every morning	You	The digest: unanswered leads, due reminders, stale quotes, unpaid invoices , any failed emails, and won ad-jobs ready for Google Ads
Sign-in requested	The shop inbox	One-time sign-in link

All of them wear the shop's look — same neon-and-steel identity as the website and the board.

07 WHAT RUNS BY ITSELF

- Every website lead is saved to the shop's own database **before** any email is sent — a lead can never be lost to an email outage. If email ever fails, your phone push says so and the ticket is flagged.
- Job photos are stored privately — only signed-in operators can see them.
- An outside watchdog checks the site every 5 minutes, and the reminder sweep runs hourly.
- Every lead remembers whether it came from a **Google ad** (down to the click), Google search, or direct. The "**Ads conversions**" button exports won jobs as a file you upload to Google Ads (Tools → Conversions → Uploads) so Google learns which clicks became paid work — that makes your ad money smarter over time.
- **Export CSV** downloads every lead as a spreadsheet whenever you want your data.

08 IF SOMETHING LOOKS WRONG

SYMPTOM	DO THIS
Sign-in link expired	Request a new one — they only live 15 minutes
Ticket says EMAIL FAILED	The lead is safe on the board. Call them, then tap "Mark handled" on the ticket

No phone alerts	Re-open /ops, check the alerts button; check phone notification settings
"Failed email deliveries" tile isn't o	Open those tickets — those leads exist only on the board until handled
